Profile

Business & Data Analyst with an interdisciplinary background in Analytics, Psychology and Finance. Experienced in requirements engineering, big data analytics, ETL, agile development, and drinking coffee in between. Proficient in Python, SQL, and Machine Learning, enabling data-driven decisions, and development of innovative GenAI products.

Work Experience

- 05/2025 – Today **Business & Data Analyst – Allianz Austria (Insurance)**
Translation of business requirements into user stories and functional specifications, with ownership of a portfolio of software products and their continuous improvement.
- Analyzed business processes, system behavior and software issues.
 - Developed SQL reports and queries to generate actionable insights and support backend.
 - Automated and optimized processes through AI integration, simplification, and digitalization.
- 10/2022 – 03/2023 **Intern Data & Analytics & Engineering – KPMG Austrian (Audit & Consulting)**
Developed data pipelines and performed data analysis for auditing and consulting projects.
- Developed SQL and Python-based extraction, transformation and loading workflows.
 - Standardized and executed data consistency and integrity checks using SSIS.
 - Supported clients regarding ERP systems and data analysis.
- 10/2020 – 03/2022 **Student Assistant Business Location Consulting – ABA Invest in Austria (Consulting)**
Supported cross-border market expansion projects through data-driven research and analysis.
- Developed web scraping and automated data collection workflows.
 - Conducted market research, lead generation, and customer relationship management.
- 10/2018 – 01/2019 **Product Management Trainee – Digital Privacy GmbH (mypio start up)**
Supporting development of a mobile privacy application.
- Conducted Requirement engineering, app testing and bug reporting.
 - Organized a focus group with app users to gather behavioral insights, followed by data analysis and reporting.

Education

- 10/2020 – 03/2026 **M.Sc. Business Analytics – University of Vienna**
Semester abroad: The Hebrew University of Jerusalem (03/2022 – 07/2022)
Thesis: "Improving Exposure Therapy through Robust Off-Policy Reinforcement Learning"
- Trained an off-policy reinforcement learning agent for exposure therapy.
 - Combining reinforcement learning with VR and biofeedback concepts.
 - Investigated feasibility of personalized digital therapy solutions.
- 10/2020 – 03/2025 **M.Sc. Psychology – University of Vienna**
Thesis: "Automation of literature screening for meta-analyses in the field of psychology: an evaluation of two text-mining approaches"
- Developed text mining pipeline with classification models to reduce manual article screening.
 - Achieved up to 99% recall while reducing manual workload by 54%.
 - Resulted in a peer-reviewed publication in *Systematic Reviews* (Springer Nature, click)
- 10/2017 – 11/2020 **B.Sc. Business Administration – Vienna University of Economics and Business**
- 10/2015 – 10/2018 **B.Sc. Psychology – University of Vienna**

Skills

Languages	Hebrew (intermediate), English (fluent), Russian (native), German (native)
Programming	Python, SQL, R, MQL (mongoDB), JavaScript, Django, FastAPI
AI	Machine Learning, Reinforcement Learning, NLP, Text Mining, Data Mining
Analytics Tools	Tableau, Amazon QuickSight, Weka, KNIME, Firebase
General Tools	Git, Jira, Confluence, MS Office, Postman & Bruno (API testing), Docker, Claude, ChatGpt

Projects Overview

Data Engineering

RAG Chatbot for CV – Private Project	
Coding language	Python, FAISS, Gemini API, FastAPI, React
Problem	A 1-page CV limits the depth of information available to recruiters.
Solution	End-to-end implementation and deployment of an interactive RAG chatbot, enabling users to explore detailed CV content, my research projects, and ask follow-up questions.
Results	Combines semantic search, LLM-based generation, and multiple source documents to provide contextual answers with source references.  Explore chatbot (click) •  GitHub (click)
Data migration & transformation – Student / Intern KPMG Austria	
Coding language	Python, SQL, MQL (mongoDB)
Problem	SQL DB needed to be migrated to NoSQL DB and back / financial transactions of clients needed to be imported into OLAP Cube to be analyzed by audit teams.
Solution	Design databases for efficient querying / design script to unpack all data files and retrieve information and import into required in MySQL database scheme.
Results	DB migration achieved / universal python & SQL script to unpack & import data.

Data Science

Automating exposure therapy to improve mental health treatments – Student/ M.Sc.	
Coding language	Python
Problem	Mental health treatments are highly individualized and costly. Especially, patients with anxiety require treatment tailored to their specific needs by a professional therapist.
Solution	Train Reinforcement Learning Agent to perform exposure therapy automatically, that might be linked to VR & bio-feedback sensors for therapy without human therapist intervention.
Results	Obtained therapist agent, which performed exposure therapy on a simulated patient model.
Automating article selection for systematic reviews in psychology – Student / M.Sc.	
Coding language	R
Problem	Systematic reviews are time-consuming and costly. The article selection can take up to months, depending on the number of articles to be screened by 2 researchers.
Solution	Use text mining to reduce number of articles to be screened by researchers. Only articles classified as selected by ML model are screened manually.
Results	Achieved recall of 99% of articles eligible for inclusion, while saving 54% of manual workload.
Detecting hate speech on social media (X platform) – Student	
Coding language	Python
Problem	Public posts might contain harmful hate speech & racism. Huge number of posts make it impossible to evaluate each post by humans.
Solution	Combination of rules-based filter with sentiment analysis to detect hateful posts. Used Negative sentiment and lower scores than control groups as proxies for hate speech.
Results	Approach was implemented but not evaluated due to lack of annotated data.

Visualization

Create interactive dashboard with Corona dataset – Student	
Coding language	Vue.js and D3.js
Problem	Dashboard had multiple user groups with different needs. Big data may slow down reactivity of interactions.
Solution	Implementation from scratch was created (User stories, 4 figures designed, code).
Results	Interactive dashboard with appealing UI / UX which satisfied the needs of different user groups, and had.
Create app to analyze & optimize stock portfolios – Student	
Coding language	Python with Django framework
Problem	Private investors usually lack skills & time for professional portfolio optimization.
Solution	Create app with interactive stock plots and a mask to calculate optimal number of each stock to obtain portfolio on efficient frontier.
Results	Basic Web App, where user can enter their own stocks, analyze their portfolio and obtain efficient portfolio weights for each stock.
